WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

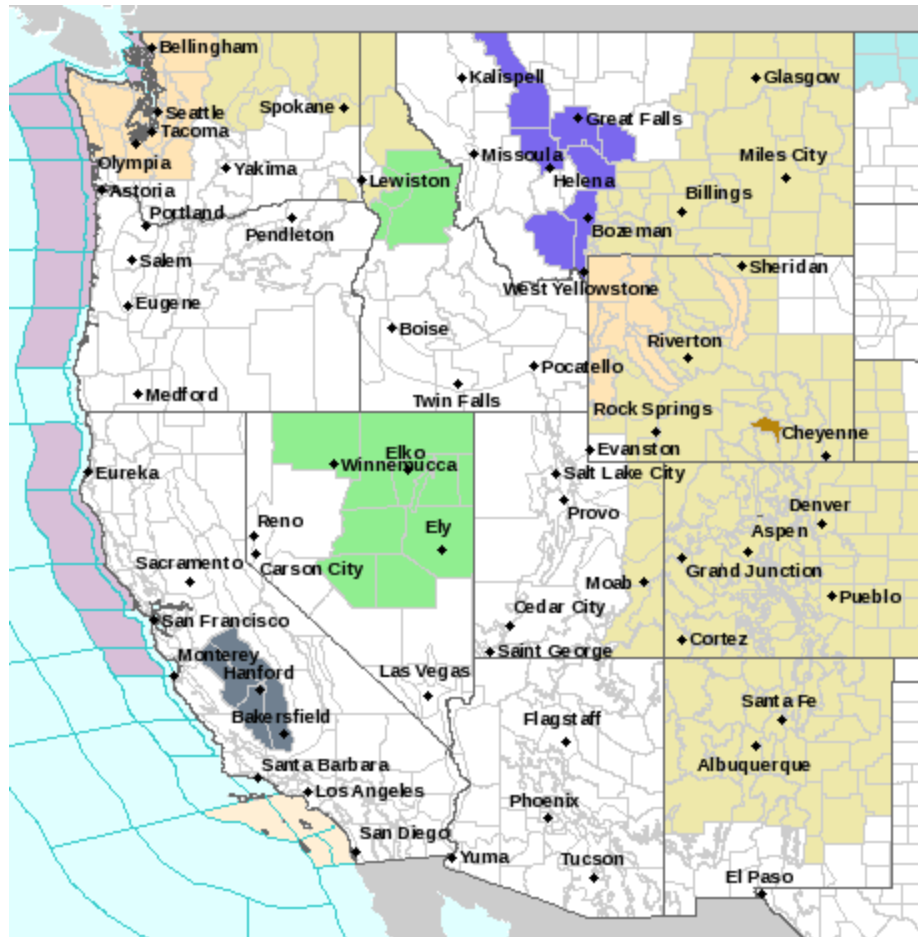

High pressure just off the CA coast will strengthen over the next few days. This pattern will produce mostly clear skies and well above normal temperatures under a dry NW-N flow aloft. At the surface N-NE winds will gust to 25 mph or so in the typical areas from the western Cascade-Sierra slopes to the coastal mountains through Friday, then increase and spread to some coastal areas over the weekend. Peak gusts this weekend will be 30-40 mph in wind-prone areas. These winds will die off Sunday afternoon, but another round of gusty N-NE winds is expected Monday night and Tuesday. At this time computer models are showing this warm, dry and occasionally breezy pattern lasting into the middle of February.

SOUTHERN CALIFORNIA

Very warm and dry through the end of next week

A strong ridge of high pressure centered off the California Coast will bring maximum temperatures that are 10 to 15 degrees above normal away from the coast through Monday. Maximum temperatures will be in the 60s to low 70s across the mountains and San Joaquin Valley and mid 70s to mid 80s in the coastal valleys. The ridge of high pressure will become centered directly over California Tuesday through the end of next week causing temperatures to warm to 15 to 20 degrees above normal. Minimum humidity will be mainly in the single digits and teens away from the coast and San Joaquin Valley through the end of next week. Winds will be light across the entire region through Monday. Gusty northeast to east winds will be possible across the mountains and below the canyons and passes of Southern California next Tuesday morning through Thursday morning.
